Insert

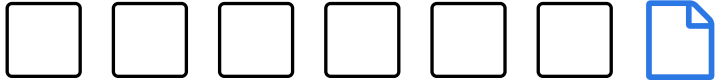

Search form and page provider used for it are configurable.
The element exposes a property to define which page provider to use.

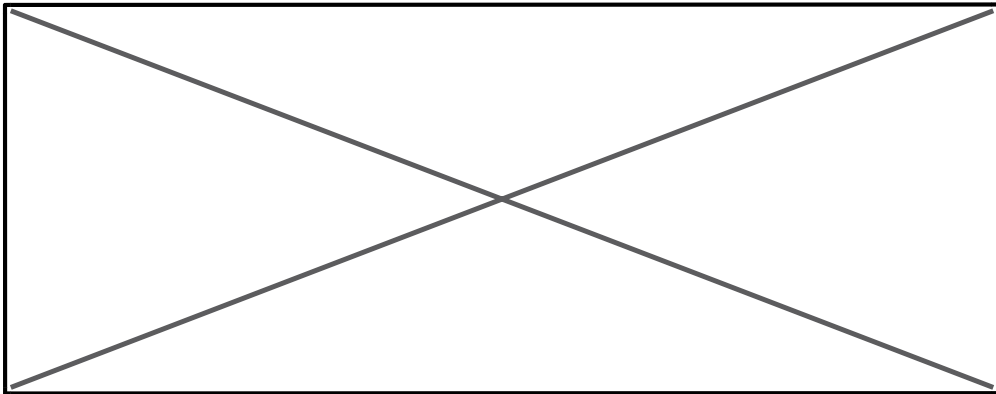

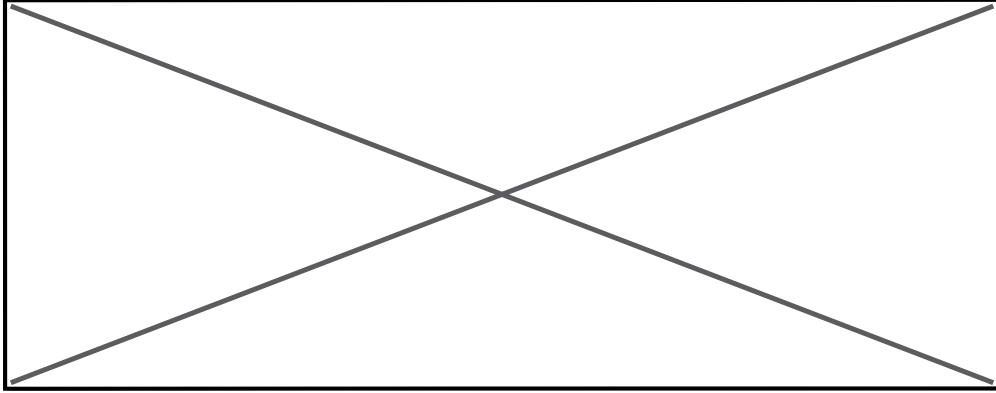

If you want to reuse the same page provider everywhere, you can leverage a layout block in Studio Designer.

Multiple assets can be selected at once.

Result

A paragraph of **text**.
A second row with a [web link](#)

A paragraph of **text**.
A second row with a [web link](#)

The default rendition for the asset is inserted in the rich text editor and stored as HTML in this way:
``
