Studio Ul Improvements

Buttons

On the top we are constantly seeing two pills, that navigate between Modeler Studio & Designer. They are in there own style, not aligned with the remaining style around Studio.

We find a constant visual conflict between those two rounded pills and other radius-free buttons right below. Since the brand is pretty angular and dynamic, and having on account that the biggest piece of UI elements found around studio are rectangular, I suggest to adapt the pills (& general buttons) for a 2px border-radius.

Now:

Suggestion:

imachado's Sandbox Nuxeo Platfor	n 9.3 🛆 master	MODELER DESIGNER IM
LAYOUTS UI RESOURCES	Layout Editor nuxeo-product-edit-layout	Revert layout Save
imachado's Sandbox Nuxeo Platform 9	3 🛆 master	MODELER DESIGNER IM
LAYOUTS UI RESOURCES	Local Types product	
Local Types		Configure product \rightarrow
 protograph_agency_loider product create 	Create consumes	
edit import metadata	edit connouneo	Revert Configuration Edit
vlew <	= import	
≻ year		

The general positive action buttons should have a stronger visual impact.

Now:

Suggestion:

The general positive/negative action buttons should have a immediate different visual impact.

Create Content Vi	ew			-0

Uggestion: Create Content Vi Feature ID * Use Elasticsearch ? index	ew		Cancel	Ok –

Gwt-button (in general AFAIK) should be #0066FF, if necessary, in some cases the + is inside the button, but it can be at the outside, like this case:

Can we have the same chromatic order as in here:

CANCEL	CREATE	CREATE ANOTHER
--------	--------	----------------

Question: Why is it cancel is on the right and save on the left here?

Aligned with the most expected usability order of actions, I would suggest: Cancel (1) / Discard Changes (2) / Save (3)

- (1) Active text #7F8284 and button with border 1px **#7F8284 no-fill**) Hover - text #0066FF and button with border 1px #0066FF no-fill)
- (2) Active text #FFFFFF and button color **#1F28BF**) Hover - text #FFFFFF and button color #000099)
- (3) Active text #FFFFFF and button color **#0066FF**) Hover - text #FFFFFF and button color #035CE3)

General buttons CSS - if possible

Main action buttons should apply the following standard rules:

- Main positive ACTION (example - Save): border-radius: 2px; color: #ffffff; font-size: 14px; background: #0066ff; padding: 10px 20px 10px 20px; text-decoration: none; :hover background: #035CE3; text-decoration: none;

- Main negative ACTION (example - Cancel):

border-radius: 2px; color: #7F8284; font-size: 14px; background: #FFFFF; padding: 10px 20px 10px 20px; border: solid #7f8284 1px; text-decoration: none; **:hover** background: #FAFAFA; text-decoration: none;

Modal Screens

The headers (top bar) of the modal screens are also with an outdated look and feel, not reflecting the innovative style of Nuxeo. It would transmit a stronger feeling of strong/future-oriented software if the style would be something more clean and strong.

Analysis:

- The styling of the headers should abandon the pale color #e3e8f3
- They should 'breath' better to be more visually appealing
- The reading hierarchy should respect the more important message to pass. In this case:
 'Welcome to Nuxeo Studio' should be more impactful
 - & 'Project Initialization' is secondary information

Creative Process - looking for alternatives:

Suggested Improvement:

- Generous margin of 30px all around
- H1: regular, 12px, #1F28BF
- H2: bold, 18px, #1F28BF
- No border dividing
- Positive action button with strong color #0066FF and white text
- Icons should also assume #1F28BF

If possible, this should be transversal to all the modal screens in Studio and Designer.
