#### JSF UI to Web UI

Current content can be migrated to Web UI. [Read Migration Documentation](#)

### Previous Migrations

Once a migration is finished, you can check [how to review and merge migration changes](#)

Date	Type	Origin Commit	Origin Branch	Result Branch	Origin Tag	Result Tag	Report
2018-01-17 3:32PM	Migration	[ commit description ]	master	master	master-jsfui-2018-01-17...	master-webui-2018-01-17...	<a href="#">Access Report</a>
2018-01-17 3:32PM	Dry run	[ commit description ]	master	N/A	N/A	N/A	<a href="#">Access Report</a>

Migration is triggered from a dedicated migration screen.

This mockup is for people who don't have branch management on their project: origin branch name is always master.

 **JSF UI to Web UI**  
A migration is currently running. Migrated: 3/25

For people who don't have branch management we should prevent them from working on their project.

The status information can't be closed until the migration is finished and covers all the screen.

2018-01-17 3:32PM	Dry run	[ commit description ]	master	N/A	N/A	N/A	<a href="#">Access Report</a>

When a migration is running, we can hide information that is not relevant and just show the status.

Since people have branch management we don't prevent them for working on their project.

OUT OF SCOPE for a first migration tool version.

Goal here is to offer a feature selection so that people can decide what to migrate.

Could be useful when we'll roll out new versions of the migration tool for people who want to migrate configuration they could not get migrated before.

Automated feature selection for migration could be based on several criteria and should be discussed, but it's really just a nice to have.
