Journey

Templates Journey - User

Steps

Discover templates are available	Select a template	Import the template	Test the template	Use the template	Migrate to a newer version
				I decide to use the template: I can leverage my work	
I know that I could use templates to facilitate my work	It's easy to find what I need. If I can't find it, I'm confident it's because it doesn't exist yet.	It feels safe to import a template. It is actually safe to import a template.	I can decide if the template is adapted to my needs because I understand what the template contains, and how it works.	Discard the template	I can tell what the newer version contains and decide if it's worth trying to use it. I understand that it's a manual process.
				I decide the template is not good for me. I can safely trash my attempt.	

Options

Move templates menu position to make it clearer? Advertise in the product?	Review browse screen	Import in a branch	Summary + link to the doc after import	Import in a branch => delete the branch if you're unhappy	What's new in the template detail, link to changelog
	Template detail screen	Simple conflict management: cancel or force import	Imported templates list with link to the doc that you can review anytime	Tag before import => revert to the tag if you don't have branch management	No mention of upgrade
		Merge files during import: app def, registries, translations			

Later

Expose templates in the marketplace		Use relations between features graph to allow renaming template files or existing files if conflict			
Select templates to install in your studio project from the marketplace					

select template

Templates are individual features or groups of features you can safely import in your project.
